**DID YOU KNOW?**

**Coconut Oil Is Better Than Any Toothpaste**

Coconut oil can clean your teeth and prevent decay better than any mouthwash or toothpaste with fluoride on the market. One study says that coconut oil is able to kill common strains of bacteria in the mouth better than toothpaste. That includes something particularly harmful called *Candida albicans*.

Great alternative to toothpaste.

**Fluoride Cause Problems In The Pineal Gland**

Fluoride is popularly known as the neurotoxin. The excessive fluoride content inhibits the synthesis of melatonin ( a hormone that helps in avoiding Alzheimer's disease and skin problems such as dark spots, wrinkles, etc. High fluoride particularly calcifies the gland and degrades its functioning. In comparison to harmful UV radiations, fluoride contents are primarily blamed for the calcification of the pineal gland. Here are some adverse effects that occur from calcification of the pineal gland:

**Obesity**

Obesity or weight gain is one of the most common problems offered by the calcified pineal gland. When the body fails to digest foods and other nutrients, the necessary fat becomes stored fat and remain there for more extended periods. This excessive or unwanted fat is termed as obesity.

**Thyroid Problems**

Indeed, you can also experience thyroid disorders because of the degraded pineal gland. Higher fluoride concentration particularly degrades the thyroid tissue. As much as about 2 mg of fluoride content reaches the thyroid and causes problems.

**Poor Blood Circulation**

For proper blood circulation, there occurs a requirement of regulation of hormones such as melatonin. Without this hormone, the heart fails to transport or circulate the blood to different body parts. Ineffective blood circulation leads to many respiratory problems

**Digestive Problems**

You can experience problems with digesting your foods and snacks. Low hormonal levels and high fluoride levels cause different issues in the digestive system. You can experience constipation from this thing.

Week #2
